

Health Extended ALliance for Innovative Therapies, Advanced Lab-research, and Integrated Approaches of Precision Medicine

The national project hub for precision medicine diagnosis and therapy is a multidisciplinary network consisting of:

- •12 Universities
- •6 IRCCS
- •6 Companies
- •1 Institute for Technical Scientific Control and Consultancy

I.M.P.A.C.T. Innovation in Medicine and Personalized Approches for Cures and Therapies

- 1. Holistic Nosology. From patients to molecules and back; mapping the omic landscape of clinical to molecular environment, to identify, classify, and refine the phenotypes of multifactorial diseases;
- 2. Intelligent Health. Health Data Science: Data management and development of advanced methods, algorithms, and machine learning approaches integrating health big data;
- **3. Prediction models:** Advanced prediction models for prognosis and therapeutic response based on comprehensive data treatment;
- **4. 4D Precision Diagnostics.** Precision medicine integrating clinical and imaging biomarkers for a *"precise in space and time"* diagnosis;
- 5. Next-Gen Therapeutics. From silico to bedside: design and validation of innovative tailored and personalized therapeutic strategies;
- 6. Healthy Toolbox: Development of innovative devices for precision diagnosis and personalized therapy;
- 7. Prevention Strategies: Integrated and gender medicine approaches for prevention strategies based on environmental, lifestyle and clinical biometric data;
- 8. Clinical Exploitation: Clinical validation and implementation of innovative predictive, preventive, diagnostic and therapeutic precision medicine approaches, based on established or emerging molecular and clinical phenotyping and AI-driven decision-making protocols.
