The Challenge, the Vision, and the Roadmap

IT'S ALL CONNECTED

1. **Holistic Nosology.** *From patients to molecules and back*; mapping the omic landscape of clinical to molecular environment, to identify, classify, and refine the phenotypes of multifactorial diseases;
2. **Intelligent Health.** *Health Data Science*: Data management and development of advanced methods, algorithms, and machine learning approaches integrating health big data;
3. **Prediction models:** Advanced prediction models for prognosis and therapeutic response based on comprehensive data treatment;
4. **4D Precision Diagnostics.** Precision medicine integrating clinical and imaging biomarkers for a “*precise in space and time*” diagnosis;
5. **Next-Gen Therapeutics.** *From silico to bedside*: design and validation of innovative tailored and personalized therapeutic strategies;
6. **Healthy Toolbox:** Development of innovative devices for precision diagnosis and personalized therapy;
7. **Prevention Strategies:** Integrated and gender medicine approaches for prevention strategies based on environmental, lifestyle and clinical biometric data;
8. **Clinical Exploitation:** Clinical validation and implementation of innovative predictive, preventive, diagnostic and therapeutic precision medicine approaches, based on established or emerging molecular and clinical phenotyping and AI-driven decision-making protocols.

The HEAL Italia project exemplifies how the whole can indeed be greater than the sum of its parts, not only in terms of organizational structure but also in amplifying research impact.

New Networks and Collaborations: The cascading funding model has enabled partnerships with external entities, fostering innovation through Proof-of-Concept projects.

Implementation of Advanced Technologies: Sharing computational tools have standardized data analysis across SPOKEs, enabling large-scale genomic studies and enhancing translational research.
